Though display of monitor Network packets Analysis should be enabled first in group Network packets analysis of Network subcategory of Parameters menu.

Beside the above mentioned restriction there is another one: it is impossible to export captured data for further processing by another program.. Such sniffer first appeared in firewall product of Kaspersky Internet Security 2009.. Hardware parameters for one of test computers are displayed below With such hardware platform in Windows XP x64 SP2 Eng 50% utilization of both cores was noticed.. It is intended rather for brief overview of incoming and outgoing traffic You can review flags of TCP transport protocol quite well, but you will have to study contents of HTTP-protocol manually.. We launched analyzer for similar hardware platform, but in Windows Vista x64 SP2 Rus.
